OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Migration	Anadromous
Coho Salmon	7/19/95		✓		✓
Dolly Varden	7/19/95		✓		✓

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Four traps were set in this moderate sized glacial stream for 3 1/2 hrs. A total of 12 coho salmon and 12 Dolly Varden were captured in the traps. The stream was walked 1/4 mile upstream and downstream of the access road - no barriers to fish were encountered. A small pond immediately upstream of the road provides clear water (non-glacial) habitat for rearing fish.

Name of Observer (please print) Randy Erickson
